

CONSTRUCTION IS MOVING ALONG AT WATERFRONT TORONTO

02-02-2009

Construction is moving along at Waterfront Toronto. The wavedecks Rees and Simcoe, which will open this summer, will provide unique gateways to the waterfront of Toronto and will create more publicly accessible spaces. Over the next few weeks, construction activities will include H-pile installation on the north wall at the Simcoe Slip and fish habitat installation at Rees Slip.

The two new wavedecks are part of a series of five. The first one, Spadina wavedeck, was opened in September 2008. The wavedecks are part of the first phase of implementation of a strategic masterplan for the Toronto Central Waterfront prepared by West 8 + DTAH, see also:
